Product Environmental Report

HONOR Magic V6

**Product**

HONOR Magic V6

Product Type

Smart Phone

Screen:

7.95-inch Inner Screen
6.52-inch External Screen

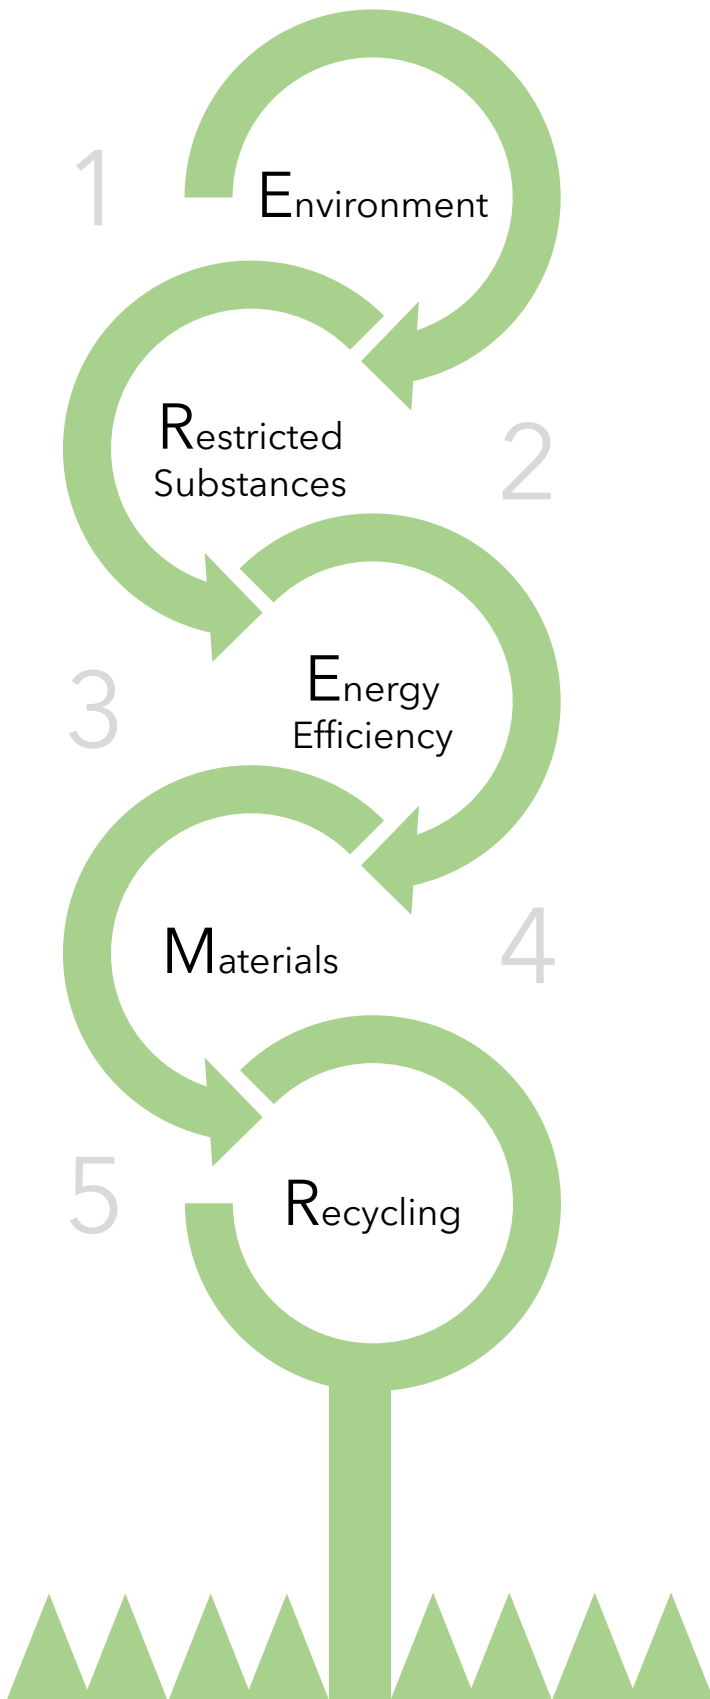

Weight

224g (handset with battery)
710g (packaged product, including
accessories and packaging)

Dimension

Folded: 156.70mm(L) × 74.50mm
(W) × 9.00mm(H)
Unfolded: 156.70mm(L) × 145.60mm
(W) × 4.10mm(H)

5 Branches of Sustainable Product Development at HONOR

Environmental Impact

Carbon Footprint

Honor's smart devices were assessed based on lifecycle assessment (LCA) methodology according to ISO 14040 and ISO 14044.

In order to determine the potential environmental impact through the whole lifecycle, we collect all the data from product bill of material (BOM), energy consumption, assumed distribution, usage scenario and disposal and set database modelling in SimaPro software.

Environmental Impact

HONOR Magic V6 Product Carbon Footprint (PCF)

The product carbon footprint environmental impact ** is based on the configuration of 16GB RAM and 512GB ROM device and assesses it through the LCA software SimaPro Version 9.6.0.1

For the assessment of the GHG emissions, the functional unit is defined at the usage of the smartphone (3 years), including its accessories and packaging. The different life cycle stage contribute to the total impact is below.

HONOR Magic V6 Life Cycle Analysis

- ✓ Raw Material & Manufacturing 82.66%
- ✓ Mobile Phone Assembly 1.3%
- ✓ Distribution 7.92%
- ✓ Consumer Use 7.96%
- ✓ End of Life Disposal 0.15%

*** The results depend on the assessment method, scoping and assumptions used, are not directly comparable with those conducted by other parties.*

Restricted Substances

Restrictions of Hazardous Substances

Comply with the strict European Directive on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment, such as RoHS Directive (2011/65/EU) and REACH (Regulation No 1907/2006), EU Battery Regulation (2023/1542/EU), EU Packaging Directive (94/62/EC), etc. is our baseline.

Honor has gone one step further to restrict the use of more harmful potential substances which haven't been regulated in the directives or regulations:

- BFR (Brominated Flame Retardants) free
- CFR (Chlorinated Flame Retardants) free
- PVC free
- Arsenic- free display glass
- Antimony trioxide free***
- Beryllium (and its compounds) free

This will reduce the negative impact on the environment greatly and promote the recycling of material resource.

*** Except the use of antimony trioxide in ceramic and glass component.

3

Energy Efficiency

Power Efficiency

The product uses power-efficient components and software that intelligently manage power consumption, these measures can reduce greenhouse gas emissions of use phase of the device.

In addition, the device including the recommended charger meets energy efficiency requirements of EU ErP Directive (EU) 2019/1782 and Commission Regulation (EU) 2023/826.

Materials

Material Selection & Recyclability

There is minimized materials used for the product and packaging and most of the material is recyclable and can be recycled easily at the disposal stage. In addition, all the packaging and manual is printed by soy ink. The paper fiber of the color box packaging is FSC certified.

In order to reduce CO2 emissions, low carbon materials such as recycled and bio-based material have been selected in the product. For example, front camera bracket and side antenna board bracket is made of post consumer recycled plastic (about 30% recycled content) and biobased plastic (about 30% bio-based content) is used in push pin.

HONOR Magic V6 Material Overview

- ✓ Metals 33.48%
- ✓ Plastics 14.52%
- ✓ Glass & Ceramics 9.92%
- ✓ Battery 31.25%
- ✓ Circuit Board 5.76%
- ✓ Others 5.06%

Recycling

A New Life for Devices

Honor has minimized material waste at the end of life through ultracompact, ease-to-disassembly, environmentally friendly design. Due to the recyclable materials is used, the smallest waste will be landfilled after professional recycling. In order to give a new life to the old ones, we have cooperated with qualified third-party recycling companies through trade-in services, this project is launched in China firstly, then will be extended to other countries in the future.

An aerial photograph of a lush green forest with a winding river. The river flows from the top right towards the bottom left, curving through the dense canopy of trees. The trees are a vibrant green, and the water is a deep blue. The overall scene is peaceful and natural.
